Audio Augmentation Package Installation

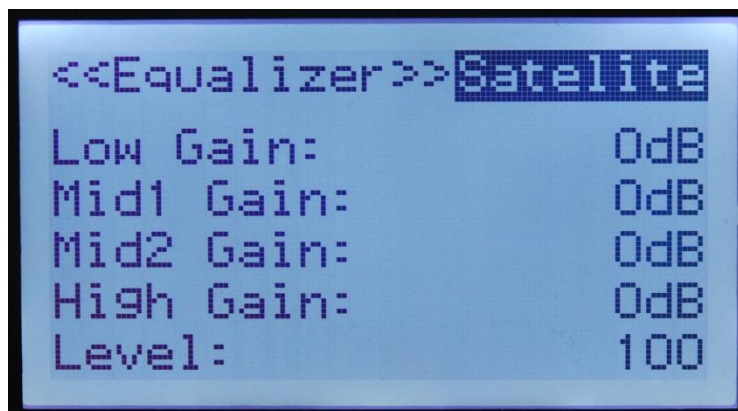

WARNING: The SATELLITE SPEAKER amplifier has a minimum impedance limitation of 8 ohms.

Do NOT connect more than one 8-ohm speaker to each channel.

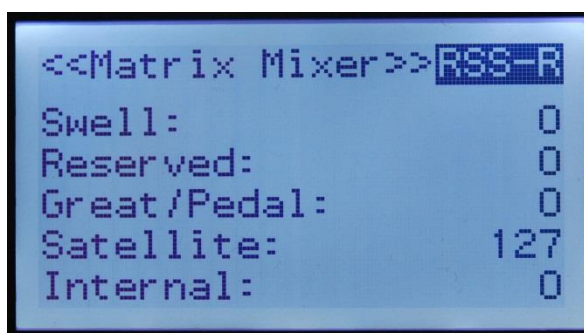

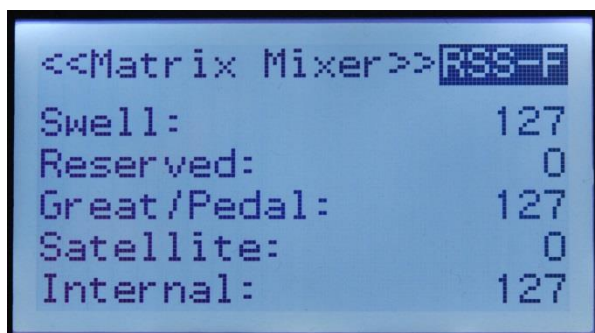

Connecting more than one 8-ohm speaker may damage the amplifier.

In order to take full advantage of the capabilities of full range speakers it is necessary to change some console audio adjustments.

Go to the organ's EQUALIZER menu and adjust the SATELLITE speaker controls as shown here.

It is recommended that only the REAR portion of the RSS audio is sent to the SATELLITE speakers and that the FRONT portion is sent to the EXTERNAL MAIN and/or INTERNAL speakers. Go to the organ's MATRIX MIXER menu and adjust the RSS controls as shown here.

NOTE: These adjustments are only recommended starting points. All installations are different and audio adjustments must be made accordingly.
